  plot_layout(guides = "collect") &
  theme_linedraw()
```

Butterworth HPF Orde 2

frekuensi input = 10 Hz

Zoom ke V_{out} lebih dekat, namun dengan mengambil data untuk syarat t :

$$t > 5ms$$

```
# filter untuk t > 5ms
zoomin <- butter2_10Hz %>%
  dplyr::filter(TIME * 1000 > 5)

vpeak <- max(zoomin$Butterworth2)

ggplot(zoomin) +
  geom_line(aes(TIME * 1000, Butterworth2), color = "blue") +
  geom_hline(yintercept = vpeak, color = "red", linetype = 4) +

  # Plot info
  labs(title = "Zoom in Vout",
        subtitle = "frekuensi input = 10 Hz",
        x = "Time (ms)",
        y = "Voltage (V)") +
  theme_linedraw()
```

Zoom in Vout

frekuensi input = 10 Hz

Dari grafik tersebut, dapat terlihat bahwa V_{PEAK} adalah (dalam volt):

```
vpeak
```

```
## [1] -0.00449706
```

F = 100 Hz

Plot sinyal V_{input} & V_{out} saat $f = 100\text{Hz}$

```
# Semua sinyal di stack
plot_all_signal <-
  ggplot(butter2_100Hz) +

  # plot informations  
  labs(title = "Zoom In Vout Bessel HPF Orde 2",  
        subtitle = "F = 1000 Hz",  
        x = "Time (ms)",  
        y = "Voltage (V)") +  
  theme_linedraw()
```

Zoom In Vout Bessel HPF Orde 2

F = 1000 Hz

Dari grafik tersebut, kurang lebih nilai V_{peak} output adalah:

`vpeak`

[1] 4.99587

4.1.3 Chebychev

4.1.3 a) Frequency Response

Mengambil data untuk Chebychev saja.

```
cheby2_freq <- freq_resp %>%  
  dplyr::select(FREQ, Chebychev2)
```

Plot respon frekuensi, juga disertakan garis bantu untuk cutoff frequency.

```
cheby2_freq_plot <-  
ggplot(cheby2_freq) +  
  geom_line(aes(FREQ, Chebychev2), color = "red") +  
  geom_vline(xintercept = CUTOFF, color = "blue", linetype = 4) +  
  geom_hline(yintercept = MAG_3dB, color = "blue", linetype = 4) +  
  
  # Plot plot parameters  
  labs(title = "HPF Filter Chebychev Orde 2",  
        subtitle = "Cutoff = 1000 Hz",  
        x = "Frequency (Hz)",  
        y = "Gain (dB)") +  
  scale_x_log10() +  
  theme_linedraw()  
  
cheby2_freq_plot
```

Max Ripple

Ripple maksimum pada Chebychev didapatkan melalui fungsi `.max()` dari kolom `Chebychev2`. Dan frekuensi saat ripple didapat dengan melakukan `filter()` data, dengan syarat $G_{dB} = ripple$, lalu mengambil kolom `FREQ` saja.

```
ripple <- max(cheby2_freq$Chebychev2)
freq_at_ripple <- cheby2_freq %>%
  dplyr::filter(Chebychev2 == ripple) %>%
  dplyr::select(FREQ) %>%
  as.numeric()

ripple
```

```
## [1] 2.96181
```

```
freq_at_ripple
```

```
## [1] 1584.893
```

```
cheby2_freq_plot +
  geom_point(aes(x = freq_at_ripple, y = ripple), color = "black",
             shape = 4, size = 5) +
  annotate("text", x = freq_at_ripple + 1200, y = ripple + 8,
          label = "(1584.893, 2.96181)") +
  labs(title = "Lokasi peak ripple Chebychev HPF orde 2")
```

Lokasi peak ripple Chebychev HPF orde 2

Cutoff = 1000 Hz

4.1.3 b) Time Domain

F = 10 Hz

Subset data untuk time domain saja:

```
cheby2_10Hz <- time_domain_10Hz %>%  
  dplyr::select(TIME, Vin, Chebychev2)
```

Plot perbandingan input dan output.

```
p1 <-  
ggplot(cheby2_10Hz) +  
  geom_line(aes(TIME * 1000, Vin, color = "vin")) +  
  geom_line(aes(TIME * 1000, Chebychev2, color = "vout")) +  
  
  # plot information  
  labs(x = "Time (ms)",  
        y = "Voltage (V)") +  
  scale_color_manual(name = "Legend",  
                     values = c("vin" = "red", "vout" = "blue"),  
                     labels = c("Vin", "Vout")) +  
  theme_linedraw()  
  
p2 <-  
ggplot(cheby2_10Hz) +  
  geom_line(aes(TIME * 1000, Chebychev2), color = "blue") +  
  
  # plot information  
  labs(x = "Time (ms)",  
        y = "Voltage (V)") +  
  theme_linedraw()  
  
p1 / p2 +  
  plot_layout(guides = "collect") +  
  plot_annotation(title = "Chebychev 3-dB HPF orde 2",  
                  subtitle = "Frekuensi input = 10 Hz")
```

Chebyshev 3-dB HPF orde 2

Frekuensi input = 10 Hz

Zoom in ke Vout saja, dengan melakukan subset data untuk syarat t:

$$t > 5ms$$

```
cheby2_10Hz %>%  
  dplyr::filter(TIME * 1000 > 5) -> cheby2_10Hz
```

Untuk mendapatkan V_{peak} maka menggunakan `max()`

```
vpeak <- max(cheby2_10Hz$Chebychev2)  
vpeak
```

```
## [1] -0.00474113
```

```
ggplot(cheby2_10Hz) +

        y = "Gain (dB)") +  
  theme_linedraw()  
  
cheby3_plot
```

Max Ripple

Karena max ripple sepertinya bersifat menuju Gain (dB) -3dB , maka fungsi yang digunakan adalah `min()`, dan diaplikasikan untuk mencari magnitude dengan lokasi frekuensi:

$$f > 1100Hz$$

Menggunakan 1100 Hz agar daerah dekat cutoff (-3 dB) tidak ikut di *scan* oleh fungsi `min()`.

```
ripple <- cheby3_freq %>%
  dplyr::filter(FREQ > 1100) %>%
  min()

freq_at_ripple <- cheby3_freq %>%
  dplyr::filter(Chebychev3 == ripple) %>%
  dplyr::select(FREQ) %>%
  as.numeric()

ripple
```

```
